

# FIRE AND CLIMATE ADAPTATION TEAM

## PURPOSE

The Drought Learning Network's Fire and Climate Adaptation Team connects professionals working to advance and unite climate and fire adaptation efforts across the Southwestern United States. Acting as a collaborative body, the team reduces redundancy and increases efficiency by connecting the multiple collaborative efforts that share a focus on increasing the pace and scale of climate adaptation in forests and fire-prone ecosystems.

## OBJECTIVES

- **Coordination:** Connect collaborative efforts by having diverse representatives from other organizations and working groups
- **Knowledge Sharing:** Leverage resources, tools, and information to reduce redundancy and increase awareness around ongoing efforts and opportunities for collaboration
- **Collaborative Action:** Work jointly to coordinate knowledge sharing events and co-produce decision-support and educational resources

## WHO ARE WE?

The Fire and Climate Adaptation Team is part of the Drought Learning Network which is a peer-to-peer knowledge exchange between climate service providers and resource managers. The team is comprised of a diverse group of researchers, practitioners, tribal partners and federal, state and local government representatives.
